Professional Experience

Senior DevOps Engineer @ Cyber Insight (2026 - Present at Leipzig, Germany 🇩🇪)

- Hardened pipeline security by deploying ephemeral self-hosted GitHub Actions runners on on-premise servers (using Ansible and Docker), integrating a custom GCP Cloud Run token-vending machine for short-lived GitHub App tokens and conducting least-privilege IAM service account audits.
- Modernized multi-cloud Continuous Delivery (CD) pipelines across GCP and Azure using GitHub Actions and OpenTofu/Terraform with Workload Identity Federation (WIF), eliminating static JSON credentials and automating zero-downtime rolling updates.
- Engineered self-contained, air-gapped distribution bundles with client-controlled AES encryption, automated Docker image archiving, and bootstrap scripts for restricted customer on-premise and Azure edge environments.
- Migrated Cloud SQL PostgreSQL to GCP IAM Database Authentication to eliminate password management, and executed major database version upgrades with near-zero downtime and query planner optimization.
- Automated organizational TLS certificate lifecycles using Google Certificate Authority Service (CAS) and Certificate Manager, establishing a shared CA pool that significantly reduced licensing costs.
- Standardized GCP Compute Engine MIG update policies and health checks for proactive VM replacement, and configured stateful RabbitMQ MIGs with persistent disk retention across instance recreations.
- Built a hybrid DNS resolution system using BIND9 and AdGuard Home to seamlessly integrate on-premise networks with GCP Cloud DNS over IPsec/BGP VPN connections.
- Reduced Google Cloud Logging spend by implementing Log Router exclusion filters to drop redundant health check logs, and authored in-depth Root Cause Analyses (RCAs) to resolve production microservice and database bottlenecks.

DevOps Engineer @ Sky Deutschland GmbH (2021 — 2026 at Munich, Germany 🇩🇪)

- Orchestrated GCP cloud infrastructure (GKE, VMs, MIGs) using Terraform and Ansible, ensuring 99.9% uptime and reducing environment provisioning time by 40%.
- Deployed Jenkins and SonarQube on GKE via Helm charts, streamlining CI/CD pipelines and increasing automated code quality test coverage to 85%.
- Architected a highly available HashiCorp Vault Enterprise cluster, automating disaster recovery and securing 500+ secrets across hybrid cloud and on-premise environments.
- Engineered automated CI/CD workflows using Jenkins and GitHub Actions, cutting build, test, and deployment lead times by 50%.
- Fortified application security by integrating HashiCorp Vault with CI/CD pipelines and microservices, achieving zero hardcoded credentials across production services.
- Automated patch management and routine maintenance for HashiCorp Vault clusters using Ansible playbooks, saving 15 hours of manual engineering effort monthly.
- Implemented automated TLS certificate issuance and renewal via Cert-Manager on GKE, completely eliminating certificate expiration outages.
- Established end-to-end monitoring using Prometheus and Grafana, designing 12 custom operational dashboards that reduced Mean Time to Detect (MTTD) by 35%.
- Configured proactive incident alerting via Microsoft Teams Workflows, decreasing team incident response and triage time by 30%.

Developer + DevOps Engineer @ SAP Hybris (SAP Customer Experience)

(2018 — 2021 at Munich, Germany 🇩🇪)

- Developed high-performance Python and Node.js microservices, handling 2,500+ requests/second with 99.9% availability.
- Built serverless RESTful APIs using Golang and Python on AWS Lambda, reducing infrastructure costs by 25%.

- Optimized release pipelines using Jenkins, Ansible, and Terraform, cutting deployment time from 3 hours to 15 minutes.
- Migrated legacy applications to Docker containers on GKE and EKS, improving scalability and resource utilization by 40%.
- Configured AWS CloudFront and Akamai CDNs, reducing global latency by 45% for high-traffic E-Commerce sites.
- Enhanced system observability with AWS CloudWatch and Dynatrace, reducing production incidents by 20% through proactive alerting.
- Streamlined incident management with Slack Workflows, improving team collaboration and resolution speed.

Associate Software Engineer @ Accenture Pvt. Limited (2013 — 2015 at Bangalore, India 🇮🇳)

- Delivered 30+ SAP BI reports and dashboards, enabling data-driven decisions for sales and finance departments.
- Optimized SAP BW data models and ETL processes, reducing data load times by 25% and ensuring 100% data integrity.
- Leveraged SAP BI tools (BEx Analyzer, Web Application Designer) to create user-friendly reporting interfaces adopted by 150+ users.
- Engineered custom SAP ABAP solutions to enhance report functionality, meeting specific client requirements.
- Collaborated directly with clients to gather requirements, delivering solutions that increased user satisfaction by 20%.

Education

- **Master of Science - Applied Computer Science** (2015 — 2017)
SRH University Heidelberg
- **Bachelor of Engineering - Electronics and Telecommunication** (2009 — 2013)
Thakur College Of Engineering and Technology, Mumbai University

Certifications

KCNA

CKA

CKAD

Istio

InfluxDB

HashiCorp Vault Operations Professional

HashiCorp Terraform Associate

AWS Certified Developer Associate

GCP Skills

GitHub Actions

GitHub Copilot

AI Essentials

Certified Jenkins Engineer 2020

Deutsch A1 Zertifikat - Telc

Languages
